
Abdul Basit Sultan

BUSINESS INTELLIGENCE DEVELOPER & DATA ANALYST | POWER BI, SQL, FABRIC

London, UK (Open to Relocation) · abdulbasitsultan36@gmail.com · +44 7587 861229 · [LinkedIn](#) · [Portfolio](#)

SUMMARY

Business intelligence developer with **3+ years** owning a **157-report Power BI estate** across **8+ client environments** in the UK, Ireland and Europe, writing the SQL and Python behind it. Built a **Microsoft Fabric** platform end to end on a governed **Medallion architecture** and delivered reporting on programmes with budgets up to **€977M**. MSc Data Science and Analytics (2026). **Full UK right to work, no sponsorship required. Available immediately.**

SKILLS

BI & Reporting: Power BI, DAX, Power Query (M), Semantic Models, Reusable Templates, Dashboard Design

Data & Platforms: SQL/T-SQL, Python, ETL/ELT, Microsoft Fabric, OneLake, Medallion Architecture, Data Warehousing, Azure

Analysis: KPI & Metric Design, Data Modelling, Statistical & Predictive Modelling, Machine Learning, Root Cause Analysis

Delivery: Requirements Gathering, Data Quality & Governance, Stakeholder Communication, Power Automate, Documentation, Git

EDUCATION

MSc Data Science and Analytics 01/2025 – 05/2026

University of Hertfordshire, England · all modules passed with distinction, final project awarded merit

BSc Computer Science 02/2019 – 01/2023

COMSATS University Islamabad, Pakistan · Database Systems, Data Warehousing, Data Mining, Statistics

EXPERIENCE

Consultant, Data Engineering and Platforms 09/2021 – 12/2024, London, UK

GagaMuller Group · clients including NTT DATA, ADA Infrastructure, Mace, Glenveagh Homes, Dublin City Council, Modulise and Google

- Owned a firm-wide estate of **157 Power BI reports** across **8+ UK, Ireland and EU client environments**, covering data preparation, DAX and visualisation end to end.
 - Cut manual report preparation by **40 to 50 percent** with **Power Automate** and reusable Power BI templates.
 - Gave commercial teams schedule performance and cost-to-completion tracking across a **39+ project, 9-campus** European programme with budgets up to **€977M**, used directly in commercial decisions.
 - Replaced direct SharePoint connections with a governed **Microsoft Fabric Lakehouse**: Python notebooks into a **Medallion architecture** on OneLake, serving a semantic layer to Power BI Service. Designed, built and tested end to end.
 - Brought design, manufacturing QA and site delivery data for a manufacturing client into one purpose-built **SQL database** via a Python ETL pipeline, enabling on-time delivery and time-in-motion reporting.
 - Kept reporting trustworthy: wrote the **SQL and Python** behind it, traced discrepancies to source with root cause analysis, and documented KPI definitions and data mapping with **Azure AD** access controls so it could be handed over cleanly.
 - Turned loosely defined requests from operational and commercial stakeholders into a specific data model and KPI set before building, then presented findings to technical and non-technical audiences.
-

PROJECTS

AI-Supported Early-Warning Analytics System MSc Project, 02/2026 – 05/2026

Python, Pandas, Scikit-learn, Statistical & Predictive Modelling, Feature Engineering, Git

- Built to flag variance and delay risk ahead of standard reporting cycles, using real planned versus actual performance data, with the work version-controlled in Git.
- Engineered 5 feature families (current state, lag, speed gap, rolling trend, time order) and compared **Ridge Regression with Random Forest** on held-out chronological splits: the weekly Ridge model reached **R^2 0.994** (MAE 0.012) against 0.970 for the best Random Forest, while staying interpretable.

One Portfolio. Four Versions of the Truth. Case study, GagaMuller

Power BI, DAX, SQL, Data Modelling

- Unified cost, cashflow, progress and schedule data from 4 disconnected sources into one Power BI reporting layer tracking a **€977M** budget and **708MW** of capacity across 12 active projects.

Designing a Governed Fabric Reporting Layer Case study, ADA

Microsoft Fabric, Lakehouse, Python Notebooks, Power BI Apps, Azure AD

- Moved reporting for 9 project areas from direct SharePoint connections into Fabric with Bronze, Silver and Gold layers, dev/test/live deployment pipelines and scheduled refreshes, documenting lineage and security groups in governance registers.
