🇬🇧 Full UK Driving License Holder 📄 Full work authorisation, no sponsorship required. Available immediately.

Business Intelligence Developer with over three years of experience delivering end-to-end data and reporting solutions for clients across the UK and Ireland. Experienced in building Power BI dashboards, data pipelines, and Microsoft Fabric platforms that give project teams, commercial stakeholders, and senior leadership the visibility they need to make decisions with confidence. Strong technical background across Power BI, Microsoft Fabric, SQL, Python, and data modeling, combined with hands-on experience working directly with clients, including Google, NTT Data, ADA, Glenveagh Homes, and Dublin City Council. Recently completed an MSc in Data Science and Analytics at the University of Hertfordshire, adding machine learning and applied analytics to an already strong BI and reporting foundation.

Professional Experience

09/2021 – 12/2024
London, UK / Ireland
(Remote)

Consultant - Data Analytics & Engineering

[GagaMuller Group](#) 

Delivered Power BI, SQL, and Python-based analytics and reporting solutions across the UK, Ireland, and the wider EU, spanning client-facing, operational, and commercial environments. Worked with stakeholders to consolidate fragmented data sources, build trusted reporting models, improve data quality, and create dashboards that helped teams understand performance, identify issues, and make better decisions.

- Acted as analytics platform owner across 3+ client environments in Microsoft Fabric and Power BI, managing end-to-end reporting from data ingestion to dashboard delivery for 20+ stakeholders, comfortable driving adoption of new BI platforms including ThoughtSpot.
- Built executive, financial, and operational dashboards across 8+ client-facing environments, giving leadership, commercial, and delivery teams a single trusted view of cost, risk, and performance, replacing fragmented spreadsheet reporting used by 20+ stakeholders.
- Consolidated 5+ fragmented SharePoint sources into a governed Fabric Lakehouse (medallion architecture), cutting reporting errors by ~35–45% and ensuring teams worked from clean, consistent, actionable data instead of disconnected manual files.
- Automated reporting workflows via Power Automate and Fabric pipelines, reducing manual report prep by ~40–50% and enabling same-day access to updated management information.
- Built reusable Power BI frameworks with pre-built pipelines, semantic data models, and dashboard templates, cutting new client setup time by ~30–40% and enabling faster project onboarding.
- Built demo-ready dashboards translating raw operational data into clear, interactive insights, directly supporting sales conversations, client onboarding, and business case presentations to prospective customers.
- Strengthened data governance by standardising KPI definitions, validation logic, and dataset structures across all reporting suites, eliminating discrepancies and ensuring every team worked from one consistent version of the truth.
- Regularly presented data findings and dashboard narratives to C-suite, project managers, and commercial leads, adapting outputs for both technical and non-technical audiences across client governance reviews.

Skills

Technical Skills

Microsoft Power BI, ThoughtSpot, Microsoft Fabric, SQL, Python, Power Automate, DAX, Data Modelling, ETL/ELT, Lakehouse Architecture, Data Governance, Dimensional Modelling, Databricks, Data Warehousing, Machine Learning

Business & Leadership Skills

Platform Ownership & Adoption, Stakeholder Management, Requirements Gathering, Sales & Business Case Support, Cross-functional Collaboration, Digital Transformation, Process Optimisation, Data-Driven Decision Making, Reporting Standards & Best Practices

Analytical & Reporting Skills

Executive & Financial Reporting, Dashboard Development, KPI Design & Performance Tracking, Data Quality & Validation, Reporting Automation, Management Information, Platform Insights, Advanced Analytics Integration, Data Literacy

Education

01/2025 – 05/2026
Hatfield, England

University of Hertfordshire

MSc Data Science and Analytics

Main Courses:

Neural Networks and Machine Learning, Fundamentals of Data Science, Data Mining, Applied Data Science and Analytics

Master's Project:

Developed a data-driven early-warning reporting system using planned and actual performance data. I built structured datasets, engineered time-based features. I created predictive models to identify future variance and performance risk, strengthening my ability to turn operational data into practical insight for decision-making.

02/2019 – 01/2023
Islamabad, Pakistan

COMSATS University Islamabad

Bachelors in Computer Sciences

Relevant modules:

Database Systems, Data Warehousing, Data Mining, Artificial Intelligence, Statistics, and Linear Algebra.

Final Year Project:

Developed a machine learning-based system integrating NLP, image processing, and predictive modeling, leading end-to-end design, development, and system integration.
