
Abdul Basit Sultan

DATA ANALYST | POWER BI, SQL, PYTHON AND MICROSOFT FABRIC

London, UK (Open to Relocation) · abdulbasitsultan36@gmail.com · +44 7587 861229 · [LinkedIn](#) · [Portfolio](#)

SUMMARY

Data analyst with **3+ years** across the full reporting lifecycle, from data ingestion and modelling through to the dashboard a stakeholder actually opens. Owned a **157-report Power BI estate** across **8+ client environments** in the UK, Ireland and Europe, writing the underlying SQL and Python myself rather than inheriting someone else's model. Designed and built a **Microsoft Fabric** data platform end to end, structured on a governed **Medallion architecture**, and delivered reporting on programmes with budgets up to **€977M**. Client experience includes Google, NTT DATA, ADA Infrastructure, Mace, Glenveagh Homes and Dublin City Council. MSc in Data Science with hands-on predictive modelling. Strong on data quality, documentation and stakeholder communication. **Full UK right to work, no sponsorship required. Available immediately.** Full UK driving licence.

EXPERIENCE

Consultant, Data Engineering and Platforms 09/2021 – 12/2024, London, UK

[GagaMuller Group](#) · clients including NTT DATA, ADA Infrastructure, Mace, Glenveagh Homes, Dublin City Council, Modulise and Google

- Built and owned a firm-wide **Power BI reporting estate of 157 reports** across **8+ UK, Ireland and EU client environments**, covering data preparation, DAX and visualisation end to end.
- Acted as **analytics platform owner** across 3+ client environments in Microsoft Fabric and Power BI, managing reporting from ingestion to dashboard delivery for **20+ stakeholders** and driving adoption of new BI platforms including ThoughtSpot.
- Designed, prototyped, built and tested a **Microsoft Fabric Lakehouse** end to end, ingesting SharePoint and Azure sources through Python notebooks into a **Medallion architecture** on OneLake, then serving a governed semantic layer to Power BI Service.
- Consolidated **5+ fragmented SharePoint sources** into the governed Lakehouse, cutting reporting errors by **~35–45%** and giving teams clean, consistent data instead of disconnected manual files.
- Delivered project and commercial reporting across a **39+ project, 9-campus** European programme with budgets up to **€977M**, including schedule performance and cost-to-completion tracking used directly in commercial decisions.
- Built executive, financial and operational dashboards giving leadership, commercial and delivery teams a single trusted view of cost, risk and performance, replacing fragmented spreadsheet reporting.
- Wrote the **SQL and Python** behind the reporting layer, extracting, transforming and validating data from source systems, and traced discrepancies back to source with root cause analysis rather than patching the dashboard.
- Unified design, manufacturing QA and site delivery data for a manufacturing client via a **Python ETL pipeline** into a purpose-built SQL database, reporting on-time delivery and production time-in-motion.
- Cut manual report preparation effort by **40 to 50 percent** through Power Automate and Fabric pipeline automation, enabling same day access to updated management information.
- Built reusable Power BI frameworks with pre-built pipelines, semantic models and dashboard templates, cutting new client setup time by **~30–40%**.
- Worked directly with operational and commercial stakeholders to translate a loosely defined reporting request into a specific data model and KPI set before building anything, then presented findings to C-suite, project managers and commercial leads, for both technical and non-technical audiences.
- Documented KPI definitions, data mapping and transformation logic, and applied **Azure AD access controls** so reporting could be trusted and handed over without the original author in the room.
- Built demo-ready dashboards translating raw operational data into clear, interactive insights, supporting sales conversations, client onboarding and business case presentations.

SKILLS

BI & Reporting: Power BI, DAX, Power Query (M), Semantic Models, Reusable Templates, Dashboard Design, Executive & Financial Reporting, ThoughtSpot

Data & Platforms: SQL/T-SQL, Python, ETL/ELT, Microsoft Fabric, OneLake, Lakehouse & Medallion Architecture, Data Warehousing, Dimensional Modelling, Databricks, Azure, Azure AD, SharePoint

Analysis: KPI & Metric Design, Data Modelling, Statistical & Predictive Modelling, Machine Learning, Trend Analysis, Root Cause Analysis

Delivery: Requirements Gathering, Data Quality & Governance, Stakeholder Communication, Workflow Automation (Power Automate), Documentation & Handover, Platform Ownership & Adoption, Git

EDUCATION

MSc Data Science and Analytics 01/2025 – 05/2026

University of Hertfordshire, Hatfield, England · all modules passed with distinction, final project awarded merit

Main courses: Neural Networks and Machine Learning, Fundamentals of Data Science, Data Mining, Applied Data Science and Analytics

BSc Computer Science 02/2019 – 01/2023

COMSATS University Islamabad, Islamabad, Pakistan · Database Systems, Data Warehousing, Data Mining, Artificial Intelligence, Statistics, Linear Algebra

Final year project: machine learning based system integrating NLP, image processing and predictive modelling, leading end-to-end design, development and system integration.

PROJECTS

AI-Supported Early-Warning Analytics System MSc Project, 02/2026 – 05/2026

Python, Pandas, Scikit-learn, Statistical & Predictive Modelling, Feature Engineering, Git

- Applied statistical and machine learning models to real-world planned versus actual performance data, engineering features to flag variance and delay risk ahead of standard reporting cycles, validated on a large real-world dataset and version-controlled in Git.
- Reshaped wide progress workbooks into long format and engineered **5 feature families** (current state, lag, speed gap, rolling trend, time order), comparing Ridge Regression with Random Forest on chronological splits.
- Weekly Ridge model reached **R² 0.994** with **MAE 0.012**, outperforming every Random Forest variant (best R² 0.970) while staying interpretable at package level.

One Portfolio. Four Versions of the Truth. Case study, GagaMuller

Power BI, DAX, SQL, Data Modelling

- Unified cost, cashflow, progress and schedule data from **4 disconnected sources** into one Power BI reporting layer tracking a **€977M** budget and **708MW** of capacity across 12 active projects.
- Standardised project identities, separated actuals from forecasts using the reporting date and wrote DAX measures that held across project, region, campus, date and delivery stage filters.

Designing a Governed Fabric Reporting Layer Case study, ADA

Microsoft Fabric, Lakehouse, Python Notebooks, Power BI Apps, Azure AD

- Moved reporting for **9 project areas** from direct SharePoint connections into Fabric, with Bronze, Silver and Gold layers, deployment pipelines for development, test and live, and scheduled refreshes.
- Documented artefacts, table lineage, report status and security groups in governance registers, with Power BI Apps and Azure AD groups controlling audience access.
